

**Name:** Boram Neurosurgery Clinic - South Korea

Overall outcomes* for :				
	Disc Herniation	Disc Degenerations	Sciatica Radiculopathy	Overall
86% or More				
71% to 85%				
56% to 70%				
41% to 55%				
Less than 40%				

**Comments:**

Actually, overall outcome is very good but in my case you should allow the point that I combine the spineMed therapy with multimodalities, for example, selective root block, IMS, manipulation etc. Subsequently the result is not solely responsible for the spineMed therapy only. For me doing this combinotherapy is because of many complicated reasons. First of all, success rate is elevated in marked degree, next it shortens the interval from the start point of the spineMed therapy to the point on which the patient feels free from the pain. And finally, it soothes the political troubles ( insurance problem).

\* The above data is not peer reviewed. It is the subjective response from a Physician grading their clinical results with the SpineMED<sup>®</sup> System.

Dear SpineMED® Operator:

As part of our ongoing effort to continually improve the SpineMED® System, we are collecting clinical performance data from all users of the device.

Please complete this survey and fax it to 250-563-3177 or email a copy to [info@spinemed.com](mailto:info@spinemed.com).

Thank you for your support.

Best regards,

Tim Emsky
